

There are more than 70 million homes in the United States, and each is full of risks for serious water damage as the result of a pressurized leak.

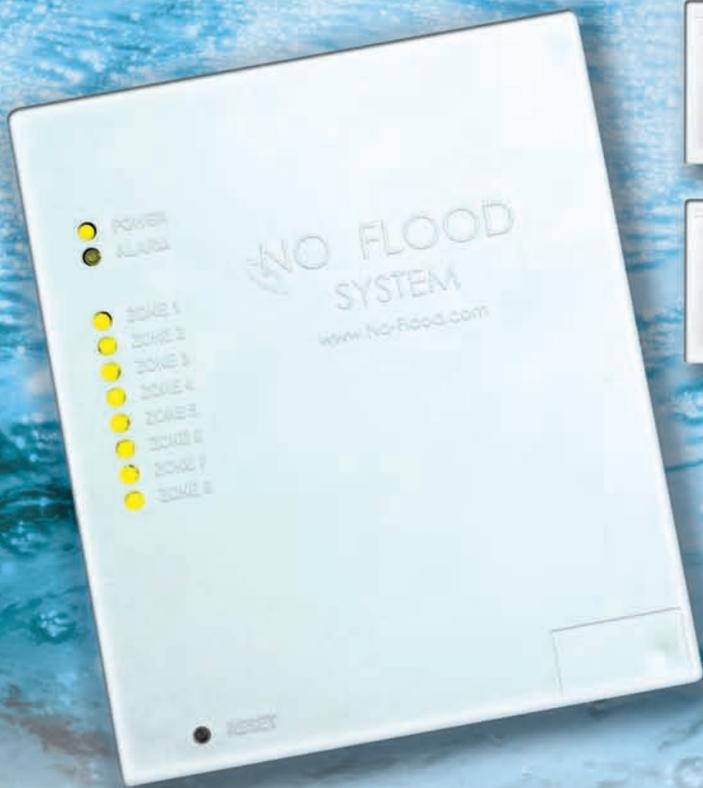

## WATER DAMAGE will occur almost anywhere in your home, at anytime.

Nationwide, insurance companies pay more than \$3 billion a year for flood-related damages. And the vast majority of these claims are the result of the accidental release of water from pressurized sources in homes and businesses. More specifically, from hoses on wash machines, water heater failures, overflowing toilets, and leaks from dishwasher lines.

Introducing the revolutionary new No-Flood wireless water detection and automatic shut-off system - protecting homes and businesses from catastrophic water release damage without the need for expensive wiring modifications. The No-Flood system features compact, self-contained water sensor units that run on a 9-volt battery and can be placed anywhere water can leak into a home or business. Once activated by the presence of water, the proprietary software generates a radio frequency (RF) signal that is then transmitted to a control unit. This intelligent system then triggers an automated actuated ball valve that closes within 10 seconds to prevent the constant flow of water through your home or business, which in some cases could result in thousands of gallons... and thousands of dollars in damage.

The easy-to-use No-Flood system includes light-emitting diodes that let you know if the battery strength is below a programmed level, or if the system has shut off the automated ball valve. With the possibility for up to eight zones that operate on different addresses, additional sensors can be used to expand the No-Flood system to accommodate many potential water leaks areas - from the icemaker to the water heater. With just a glance, you are able to determine where the leak originated and resolve the problem.

## FEATURES

- UP TO 8 INDEPENDENT ZONES
- COLOR LED DISPLAY ON BASE UNIT INDICATES STATUS
- SYSTEM OPERATES ON 12 VDC, SAFETY FEATURE
- 9 VDC SENSORS CAN BE PLACED ANY WHERE IN THE HOUSE
- LOW BATTERY WARNINGS ON THE BASE UNIT FOR INDEPENDENT ZONES
- BASE UNIT HAS EXTRA OUTPUT FOR EXPANDABILITY
- WATER VALVE CONFIGURABLE WITH PIPE THREADS OR SWEAT FITTINGS

This Patented advancement in water damage prevention is safety approved and runs on only 12 volts of electricity. The shut-off valve is NEMA 4 certified, for outdoor installations in some areas. Most importantly, though, No-Flood can save your home or office from costly damage. By eliminating the flood in the first place mold problems that can make it virtually impossible to sell your home can be wiped out completely.

No-Flood is completely wireless, meaning that existing homes can easily be retrofitted to include a No-Flood water detection system. No hard wiring is required except for the connection to the automated shut-off valve. And once it's installed, No-Flood solves the problem for good. **We guarantee it.**
