

Optimal Point of Impact Training

Perfection Sleeves

OPOI's Perfection Sleeves are designed to isolate the optimal point for hitting a golf ball during driving or iron play. This point is surrounded by a dense silicon, which, when contacted, absorbs the energy from the hit and reinforces the ball's dead spot.

When incorrect technique is used the club will come into contact with the energy absorbing material and produce a numb sensation through the club as well as a hollow sound. When the correct technique is used the feel and sound of the hit is perfectly normal.

Quick Application

Simply slide the sleeve over a golf ball during training sessions or just before playing a game to create confidence behind the ball.

Unique design

The Perfection Sleeve highlights the golf ball's sweet spots, allowing the user to easily identify the best place to contact the ball for the perfect shot.

Instant Feedback

The Perfection Sleeve ensures minimal movement if a ball is contacted incorrectly, or a perfect shot if contacted correctly. This instant feedback enhances a golfer's feel for the perfect technique.

Beginners to Professionals

From beginners to professionals, the Perfection Sleeve can teach or hone the perfect technique irrespective of skill level.
