**IN-LINE PASSIVE POWER GENERATOR**

Inserts Into Ducts For Passive Power Generation

- **Zero emissions** power generator
- Easily inserts into any type of ducting network
- Passively generates power by recovering energy from hot or cold air flowing in a duct
- Suitable for many types of industrial airflow applications
- Generated power can be used internally to reduce energy costs or sold to a utility company
- Several systems can be coupled together to increase power output
- Become greener with our **carbon neutral** power generation technology
- Prototype systems available for demonstration upon request
- Contact B&B Innovators today for more information

* Patent Pending
